Subject: Application for Werkstudent Windmessung & Energieertragsbewertung (m/w/d) Onshore-Wind (Werkstudent)

Dear Hiring Team at EDF power solutions Deutschland,

I am writing to express my strong enthusiasm for the **Werkstudent Windmessung & Energieertragsbewertung (m/w/d) Onshore-Wind** position at **EDF power solutions Deutschland** in Berlin, Germany. Currently residing in Berlin and enrolled in the M.Sc. Data Science program at GISMA University of Applied Sciences, I combine rigorous theoretical foundations with direct production experience in full-stack Python engineering, data processing, and machine learning systems (Python, Machine Learning, Data Science).

My Master's specialization directly covers **Business Intelligence, Data Visualisation, and Product Analytics**. I architected and delivered the Auslandly Consultancy CRM using React, Supabase, and PostgreSQL with real-time data sync, owning delivery end-to-end. At Crack-ED, I spearheaded sprint CI/CD pipelines and designed analytics dashboards tracking active user engagement. Through these initiatives, I have developed a disciplined approach to translating complex analytical problem sets into performant, reliable software implementations.

In addition to my technical repertoire, I am currently gaining valuable German operational experience working part-time at **Formel D Group** on the **Tesla Gigafactory project** in Berlin-Brandenburg. Conducting rigorous technical quality control and defect inspection on vehicle components adhering to strict German automotive standards has reinforced my commitment to precision, data integrity, and zero-defect execution.

As a registered Master's student based locally in Berlin, I possess full legal work authorization for student employment (Werkstudent up to 20 hours per week during the semester, and full-time during breaks) without requiring visa sponsorship. I communicate fluently in English, possess **German A2** proficiency which I am actively advancing, and can integrate seamlessly into your engineering team immediately.

Thank you for your time and consideration. I welcome the opportunity to discuss in an interview how my technical skills and proactive work ethic can support EDF power solutions Deutschland's milestones.

Sincerely,

Dandu Purnachandra Madhukar
